

KeWin multimedia – the most reliable high-speed lottery terminal around

Retailers with medium to high ticket volumes require a genuinely fast lottery terminal and with its unrivalled speed and precision, the KeWin multimedia represents the perfect answer. Moreover, together with the KeWin micro, the KeWin multimedia forms a terminal family that ranges from low-volume to high-speed and allows mixing.

KeWin multimedia uses high quality, standard industrial PC components. This means that further technical developments can be utilized and in the case of functional extensions, investments are safeguarded.

KeWin multimedia scans, evaluates and processes betting slips up to a size of DIN A4 and US letter. Instant tickets are processed via barcodes. A customer display is available for multimedia marketing.

KeWin multimedia – the most reliable high-speed lottery terminal around

Advantages of the KeWin multimedia at a glance

- Scanner and printer speed and precision (recognition, evaluation and further processing). High throughput prevents queuing, especially at peak times.
- Reliability and availability that rule out sales losses.
- The technology for the compact scanner was developed in-house.
- The scanner processes tickets with formats of up to DIN A4 and US letter using full-surface scanning and OCR/OMR evaluation. This means that new games can be introduced rapidly.
- The use of standard, high-quality industrial PC components with long-term availability. Expansion using components available on the PC market, e.g. network or communication cards, is possible.
- Open system architecture for the employment of different operating systems and connection to diverse central systems.
- KeWin multimedia has an ergonomic design that integrates every movement into the workflow and assists operation.
- Top technology in compact design.

Components

The KeWin multimedia integrates ergonomic operation with the harmonious design of the basic terminal and printer. These core units can be used separately or combined, thus permitting flexible system installation in line with the space available. Moreover, KeWin multimedia functionality can be extended with numerous options and the colour of the terminal can be freely selected (RAL, Pantone) to match lottery company corporate design.

Basic components

- Basic terminal including
 - TFT operator display with touch screen (12,1" or 15")
 - Ticket scanner (OCR/OMR/barcode) with scanning width of DIN A4 or US letter
 - System control with various interfaces (USB, RS232, ...)
- High-speed thermal printer capable of handling graphics

Options

- Customer display (TFT colour display, 4-line or 2-line display)
- Branding
- Integrated or external barcode reader (1D or 2D)
- Data communication devices (e.g. GPRS/UMTS, WLAN, etc.)
- Integrated chip card reader
- Hard disk/SSD
- Memory expansions for RAM and flash
- Processors in differing performance classes
- External cash drawer
